Plunkett Centre for Ethics in Health Care

Annual Report 1997
Plunkett Centre
for Ethics in Health Care

AUSTRALIAN CATHOLIC UNIVERSITY

St Vincent’s Health Care Campus,
Sydney
'It is a fact, basic to human life, that we are consoled by knowledge that others suffer as we do and must die as we must. That might seem like consolation achieved for unworthy reasons, but really it does not express an inadequate concern for others. It is an expression of the fact that we are creatures who seek to make sense of our lives. The need to make sense is not driven only by a response to one's own suffering, but also by a more general need to understand what it means to live a human life, and what death shows us about that meaning.'

From the Management Committee

It is not too difficult to think about ethics in general. It is also not very hard to discuss various health care alternatives as long as only the bottom line matters. However combining the two presents a formidable challenge to the best of our minds.

Australian Catholic University took this challenge seriously when some five years ago it entered into an agreement with the Sisters of Charity which formalized the existence of the Plunkett Centre. In cooperation with the Sisters of Charity at St Vincent's Hospital the Plunkett Centre has become a most respected mouthpiece for spelling out the assumptions, implications and consequences of competing ethics models in health care.

At a time when universities in this country are increasingly pressed to produce two dollars worth of tangible output for each dollar of input, the Plunkett Centre is living testimony to the University's firm conviction that ethics matter.

This annual report of the Plunkett Centre is concrete evidence of the research, teaching and consultancy conducted during the past year. I congratulate the Director of the Centre and her staff for their inspiration, commitment and hard work to show the relevance of the Christian imperative in this secular world of ours.

Professor Wolfgang L Grichting
Chair, Management Committee
March, 1998
‘The euthanasia debate turns upon fundamental ethical issues which are too important for us to allow this debate to become intractable, too important for us to allow ourselves to settle for the minimalist 'liberal' solution. Contrary to popular perception, the 'burden of proof' in this debate remains on those who would legalise euthanasia. But far from discharging that burden, the advocates of legalised euthanasia have, at best, tried to circumvent it by the simplistic appeal to personal autonomy.’

‘Fortunately gene mapping and screening can be done in ways which do not compromise respect for human life in its transmission, origins and development, from conception until death. But history gives us plenty of cause for caution here. At a recent conference a leading embryologist responded to a question about where she drew her moral lines with an answer to the effect that she was no ethicist and her limits were whatever her Institutional Ethics Committee would let her get away with!’

Anthony Fisher OP in ‘Ethical Issues in Genetic Screening’, *Bioethics Outlook* Vol 8 No 4 December 1997
Mission Statement

The Mission of the Centre is to examine the ethical aspects of contemporary practices in health care and bioethics and, by research, teaching and community service, to contribute a Catholic perspective to public discussion about what constitutes good conduct and wise decision-making in health care and biomedical science in Australia.

The objectives of the Centre are:

- through research, to analyse and clarify the ethical and theological issues at stake in the provision of health care and in the conduct of biomedical science and thereby to contribute to the development of a sound bioethic;

- through teaching and consultation, to discipline and deepen health care professionals' understanding and appreciation of the contribution of philosophical ethics and theology to the practice of health care and medical research; and

- through community service, to contribute a Catholic perspective to the development of standards and practices in health care and biomedical science in Australia.
Dr Tina Clifton, Dr Bernadette Tobin and Professor Peter Drake at the ceremony in May last year at which the Memorandum of Agreement between Australian Catholic University and St Vincent's Health Care Campus Sydney was renewed for a further three years.
Director's Report

By now the Centre's distinctive 'virtues-based' approach to the ethics of health care should be well-known. This approach contrasts with the idea that ethics is either (a) a matter of resolving 'dilemmas' which have been generated by application of a few principles ('respect for autonomy', 'beneficence', etc) or (b) a matter of the 'consequentialist' calculation of what will bring about the 'greatest good'.

Our 'virtues-based' approach relies on the idea that, though an important part of the moral life lies in understanding the meaning and significance of moral principles, and though consequences matter, what is central in the life of a wise and good health care professional is an understanding of (and love for) the genuine goals of health care together with an intelligent and willing capacity to work towards those goals in collaboration with patients and others whose health is at stake.

This approach to the ethics of health care, when allied with certain theological assumptions about the nature of human beings and the significance of their lives and health, is one expression of a Catholic theology of health care. However it also stands on its own as a way of doing ethics which has been the subject of a lively revival of interest amongst secular philosophers.

Perhaps the most important occasion in the life of the Plunkett Centre during the last year was the signing, on 15th May, of a new three-year agreement between Australian Catholic University and St Vincent's Hospital Sydney. The then Vice-Chancellor, Professor Peter Drake, and the Regional Chief Executive Officer of the Sisters of Charity Health Service, Dr Tina Clifton, were signatories to the Agreement which provides for basic funding for the Centre for a further three years from both of its sponsoring institutions together with the direction and support of a Management Committee made up of representatives of the University and the Hospital.

During 1997 the Centre initiated two new research projects. The first project, which involves collaboration with the Australian Catholic Health Care Association, aims to identify the ethical issues associated with the introduction of 'managed care' concepts into the Australian health care scene and ultimately to provide guidance, by way of analysis and guidelines, for health care professionals working in a 'managed care' environment.
The second new project, a collaborative research venture with the Anxiety Disorders Clinic at St Vincent's Hospital, has as its goal an understanding of what constitutes a just allocation of health care resources to people who suffer mental illness. Support for the latter project is provided by the Australian Research Council's Postgraduate Award Scheme: Mr Peter Madden joined the Centre in July in order to undertake this research project.

The Centre's consultative service was once again put to frequent use during the year. Consultations included the writing of invited submissions to government bodies and statutory authorities, personal participation in reflections with health professionals on difficult individual cases or case-scenarios in the hospital, and the provision of information and advice to a wide range of community bodies and health and aged care institutions.

During the year the Centre's staff contributed to a number of educational programmes, both supervision and teaching. Two post-graduate research students, working on philosophical issues in the ethics of health care, were associated with the Centre, and the University's Master of Arts in Applied Ethics (Health Care) was taught in part by members of the Centre. During the year a second group of students completed this course-work degree.

In 1997 the Centre changed the format of its annual Intensive Bioethics Course from a weekend course to one which was conducted one evening a week for four consecutive weeks. This provided one of several occasions on which Dr Anthony Fisher OP, the only member of the Centre who lives outside Sydney, was able to take part in person in the Centre's activities: Dr Fisher undertakes a busy programme of teaching, research and community activities from the Ascot Vale campus of Australian Catholic University in Melbourne.

Once again I would like publicly to record my appreciation of the work of the Centre's Administrative Office. Barbara Reen retired from that position during the year in order to return to full-time study, and Sandra Menteith took over the position. Both contributed to the life and achievements of the Centre well beyond anything which might rightly be expected of them: we are greatly in their debt.

Secretary, Australian Association for Professional and Applied Ethics  
Editor, Australian Ethics Newsletter

Quilter, J.
Member, Committee of Review of Post-Graduate Courses, Faculty of Health Sciences  
University of Western Sydney, Sydney

Tobin, B.M.
Member, Australian Health Ethics Committee (NHMRC)  
Member, Working Party on National Data Collecting in Assisted Reproductive Technology (NHMRC)  
Chair, Bioethics Consultative Committee, St Vincent’s Health Care Campus, Sydney  
Member, Steering Committee, Liaison between Australian Catholic University and the Caroline Chisholm Centre  
Founder and Trustee, Mary Philippa Brazill Trust  
Member of Council, Guild of St Luke  
Member, Bioethics Panel, Research Office, Australian Catholic Bishops’ Conference
Consultancies

The number and range of consultancies undertaken by staff of the Centre continues to grow. Requests for consultation on ethical issues come not only from people associated with the Darlinghurst Campus of the Sisters of Charity Health Care Service but also from people working in other health care facilities and from the general public. It goes without saying that these consultations are undertaken on a confidential basis. The following information indicates in general terms some of the features of this part of the Centre’s work.

Overall number of consultations undertaken by staff of the Centre in 1997: 33

from within the Darlinghurst Campus 11
from outside the Darlinghurst Campus 23

Range of people seeking a consultation:

- Health care administrators 4
- Doctors 5
- Nurses 7
- Relatives of patients 4
- Religious 4
- Parliamentarians 2
- Teachers 1
- Students 2
- Other bioethics centres 3

Types of issues on which consultation is sought:

- conditions under which it is proper to withdraw life sustaining treatment
- distinction between forgoing futile treatment and aiding someone to commit suicide
- management of a ‘hateful’ patient who is terminally ill (2 cases)
- the mechanical restraint of difficult patients (3 cases)
- relationships between medical staff of a teaching hospital and pharmaceutical companies
- uses of therapies which have a contraceptive side-effect
- the withdrawal of nutrition from a patient who is dying (2 cases)
◊ management of a client who intends to commit a crime
◊ job opportunities in bioethics (3 cases)
◊ role of advance directives (2 cases)
◊ euthanasia (2 cases)
◊ surrogacy
◊ reversal of vasectomy
◊ evaluating the results of cardiac surgery
◊ management of Catholic hospital now administered by government
◊ resource allocation
◊ policy formation on genetic interventions
◊ care and treatment of severely-ill newborn children
◊ IVF and GIFT
◊ discarding of foetal remains
◊ the problem of 'cooperation in wrongdoing'
◊ cloning
◊ confidentiality
