AUSTRALIAN CATHOLIC UNIVERSITY
TEACHING AND LEARNING PLAN
2006 - 2008

CONTEXTUAL STATEMENT

Australian Catholic University’s Teaching and Learning Plan 2006 – 2008 continues to affirm the University’s unequivocal commitment to the centrality of teaching and learning in its mission. In building on the achievements of the Teaching and Learning Plan 2003 – 2005 as well as setting new priorities, this Plan re-affirms the importance for the University of the maintenance and ongoing development of quality teaching and learning. The Plan is grounded in excellence in teaching and learning as detailed in the University’s Mission Statement and Strategic Plan (Revised) 1999 – 2008 and progresses the development of student-centred teaching and learning. It is the blueprint for actualising the University’s Policy on Quality Teaching and Learning [included as Appendix A] and engages all members of the University community in the central mission of teaching and learning.

The Teaching and Learning Plan 2006 – 2008 is organised in terms of three broad Targeted Outcomes:

• Students demonstrate progress towards the achievement of graduate attributes;
• Academic programs reflect the Mission of the University; and
• Academic staff demonstrate quality teaching and learning.

It sustains commitment to the following priorities of the 2003 – 2005 Plan:

• teaching and learning which attends to spiritual, moral, values and ethical perspectives in the Catholic tradition – a key dimension within the University’s curriculum and made explicit in the University’s Mission Statement. This includes attention to equity, developing awareness of multicultural and Indigenous issues, and a sensitivity to social matters of significance;

• the empowerment of academic staff and students to engage in teaching and learning which:
  ▪ meets professional accreditation needs;
  ▪ is critical, well informed, up-to-date with knowledge and research in the substantive disciplines, and innovative; and
  ▪ makes appropriate use of information and communications technologies;

• the systematic development and use of course and unit documentation, learning experiences and resources to support best teaching and learning practice; and
• the monitoring and evaluation of teaching and learning processes and outcomes to maintain the focus on excellence, quality and relevance.

In progressing and building on the previous Plan, the Teaching and Learning Plan 2006 – 2008 is characterised by:

• affirmation and consistent grounding in a values orientation in the Catholic tradition as expressed in the University’s Mission Statement, throughout all aspects of the University’s teaching and learning activities;

• explicit emphasis on the identification, development and awareness-raising of generic skills for all students;

• evaluation, monitoring and refinement of assessment practices to ensure just, equitable and quality teaching and learning outcomes for all students;

• commitment to the actualisation of quality online teaching and learning outcomes for all students; and

• the embedding within teaching and learning of community engagement and research and scholarship objectives consistent with the University’s Endorsed Statement on Community Engagement [included as Appendix B] and the Research and Research Training Management Plan http://my.acu.edu.au/3277, respectively.

DEVELOPMENT OF THE TEACHING AND LEARNING PLAN

The Teaching and Learning Plan 2006 – 2008 was developed by the University Teaching and Learning Committee and involved input from the Pro-Vice-Chancellor (Academic Affairs), Associate Deans (Teaching, Learning and International) and the Institute for the Advancement of Teaching and Learning. The consultative process with the wider University community included seeking feedback on the draft Plan from the Faculties and relevant Directorates followed by discussion of the Plan at the Academic Board Standing Committee and then its formal consideration by Faculty Boards and Academic Board. Following approval of the Plan by Academic Board, it will be forwarded to the Senate for endorsement.

IMPLEMENTATION AND REPORTING ON THE TEACHING AND LEARNING PLAN

The Pro-Vice-Chancellors, the Faculties and the Directorates of the University will play important roles in realising the strategies contained within the Teaching and Learning Plan 2006 – 2008. Overall implementation of the Plan will be overseen by the University Teaching and Learning Committee. The Pro-Vice-Chancellor (Academic Affairs), who is the officer responsible for monitoring progress, will formally seek annual reports from the responsible officers and present a collated report of progress to Academic Board each year.
The Plan identifies the officers/units with reporting responsibilities for each objective. As with any complex task, this responsibility is often shared. So as to minimise duplication of reporting on outcomes and to ensure a collaborative approach, the officer/unit shown in boldface is responsible for liaison with other relevant contributors and for providing a consolidated report for relevant components of a specified strategy. Where more than one responsible officer/unit is shown in boldface, it is expected that more than one report will be necessary to cover all aspects of that particular strategy. It is emphasised that responsibility for teaching and learning must be accepted as a shared responsibility across all Faculties and Directorates despite any notional reporting responsibility. The partnership between all units to support and improve teaching and learning is an underpinning concept of this Plan.

It is expected that reporting will:

- specifically address Key Performance Indicators (KPIs);
- be evidence-based, using available statistical sources and valid relative indicators in the case of improvement/maintenance KPIs;
- make informed reference to context and interpretation to illuminate data sources.

Progress will be monitored, evaluated and reported annually to Academic Board and, where possible, data will be included to assist in identifying any trends. The new Plan will be developed every three years. As such, the Plan seeks to address identifiable teaching and learning issues in a considered manner and is deliberate in its intent of:

- building incrementally on previous achievements;
- strategically introducing key emerging priorities for the lifetime of the Plan; and
- setting clear and concise targeted outcomes that are achievable within available resources.

JW: C:\execoff\committees\teaching&learning\Policy\University’s T&L Plan 2006-2008.doc
INTRODUCTION
Australian Catholic University shares with universities worldwide a commitment to high-quality teaching and learning, research and community engagement. It is aware that a key factor in its reputation as a higher education institution is its ability to excel in teaching and learning and to produce quality graduates. As part of its Mission the University declares its commitment to the centrality of teaching and learning. This Policy document articulates the broad principles underlying teaching and learning in the Catholic tradition at Australian Catholic University. These are that:

- teaching and learning attends to spiritual, moral, values and ethical perspectives – a key dimension within the University’s curriculum. This includes attention to equity, developing awareness of multicultural and Indigenous issues, and sensitivity to social justice;
- academic staff and students are empowered to engage in teaching and learning which:
  - meets professional accreditation needs;
  - is critical, well informed, up-to-date with knowledge and research in the substantive disciplines, and innovative; and
  - makes appropriate use of information and communications technologies;
- course and unit documentation, learning experiences and resources are systematically developed and used to support quality teaching and learning practice; and
- teaching and learning processes and outcomes are monitored and evaluated to maintain the focus on excellence, relevance and quality.

These principles provide the foundation for the University’s Teaching and Learning Plan. The Plan formally commits the University to the maintenance and ongoing development of quality teaching and learning.

Staff are expected to abide by the University’s Code of Ethics in Teaching, which articulates the principles of scholarly competence and engagement. It also provides the framework for scholarly respect for students, colleagues and the University, to shape relationships and interactions in which academic staff and students engage in teaching and learning.

Responsibility for monitoring the quality of teaching and learning resides in the Faculties. Within the framework of the University’s Teaching and Learning Plan, each Faculty has a derivative Teaching and Learning Plan, which is updated annually and in which the procedures for ensuring quality in teaching and learning are described in detail, with the enhancement of learning the primary outcome of quality teaching.
UNDERSTANDING QUALITY TEACHING

In one sense, effective teaching is very easy to identify: it is what leads to effective learning. It is not as easy, however, to specify what particular approaches and techniques will produce this desired result. The literature on effective teaching in higher education stresses that there is no straightforward formula, no single way of helping people to learn. Students testify that they have learned well in a variety of contexts, from a variety of teaching styles, ranging from the charismatic brilliant lecturer to the non-interventionist, supportive facilitator.

It is possible, however, to articulate broad, general principles as a guide to staff and students. In recent years, a great deal of work has gone into the formulation of such principles at a national level and very useful sets of guidelines have been published, after consultation with interested groups in higher education. These include the AVCC’s Guidelines for Effective University Teaching (1993) and the DETYA document Benchmarking: A manual for Australian universities (McKinnon, Walker and Davis, 2000, Chapter 6).

In order to maximise the potential of the learning experience for all students at Australian Catholic University, members of the Faculties responsible for course delivery are encouraged to achieve the following characteristics of effective teaching.

EFFECTIVE TEACHING

- is conducted in the context of, and with reference to, the goals and objectives of the University, and its Faculties and Schools;
- is focused on learning outcomes for students, in the form of knowledge, understanding and skills and aims to develop the attitudes and values of mature adult learners;
- proceeds from an understanding of students’ knowledge, capabilities and backgrounds;
- is coherent in the integration of objectives with teaching procedures and assessment;
- ensures the clear communication to students of expectations, requirements and ways in which they can achieve their potential;
- engages students as active participants in the learning process, while acknowledging that all learning must involve a complex interplay of active and receptive processes, the constructing of meaning for oneself, and learning with and from others;
- encourages questioning and criticism of accepted views and theories;
- is based on an awareness of the limited and provisional nature of knowledge in all fields;
- is linked with the latest research and scholarship in ways that allow students to see how understanding evolves, and is subject to challenge and revision;
- attempts to excite students about innovative developments in their discipline areas;
- promotes the development of co-operative learning among students and lecturers;
- provides opportunity for improved information literacy;
- makes use of a wide range of teaching strategies, including the use of various information and communication technologies;
- encourages students to develop independent learning skills by providing appropriate
tasks to develop analytical and critical thinking skills;
• respects students’ views and responses;
• is grounded in a concern for the welfare and progress of individual students;
• assists students to form broad conceptual understandings of areas of knowledge;
• encompasses an inclusive curriculum, being open to a range of perspectives from
groups of different cultural backgrounds, and is committed to facilitating learning
climates which are supportive of all students;
• is sensitive to the particular needs of students with disabilities;
• encourages awareness of Mission focus including ethical dimensions of issues and
problems;
• takes into account feedback from students about their learning and the perceived
effectiveness of teaching strategies, obtained regularly through a range of formal and
informal evaluations;
• draws on and contributes to engagement with the community.

The University’s Institute for the Advancement of Teaching and Learning focuses on
supporting lecturers in many of the areas listed above. It also responds to expressions of
need identified by academic staff either formally through the Academic Staff
Performance and Review Planning Program or informally as a result of individual staff
requests.

UNDERSTANDING QUALITY LEARNING
While the learning promoted by all universities is focused primarily in the areas of
knowledge and understanding, and cognitive skills, Australian Catholic University
focuses particularly on learning leading to the holistic development of its students and
staff. Effective teaching can enhance many aspects of learning, including physical,
aesthetic, intellectual and personal dimensions. However, an individual's beliefs,
dispositions, attitudes and values all influence personal learning and effective personal
learning depends upon an open-minded response from the learner.

To stress the importance of promoting holistic learning, a "Learning Paradigm" is
embedded in the University’s Strategic Plan:

What value the Learning Paradigm adds to the style and substance of this
University's existence is central to its raison d'etre. The University should
provide the right kind of learning experiences, be they academic, spiritual, ethical
or other; and the University fundamentally should be at the service of its students
as it attempts to assist each of them, "its entire diversified and dispersed student
body", as part of their "personal, spiritual and moral development" so that they
will become "valued in employment and in the life of the community at large".
The Learning Paradigm reflects this self-understanding of the role and purpose of
the University as it aims to discern methods and approaches that best suit the
needs of the students. (Australian Catholic University Strategic Plan Working
Paper No. 2 – The Learning Paradigm)
In the implementation of the Learning Paradigm, the University promotes and facilitates learning that:

• is autonomous and self-motivated;
• is characterised by the individual taking satisfaction in the mastering of content and skills;
• realises the development of a sense of the academic disciplines;
• proceeds from the learner striving to grasp the "meaning" of what is being learnt, both for the wellbeing of the individual and the community;
• can be fostered by cooperation and respectful interaction with others;
• has a lifelong orientation for the enhancement of the individual and society;
• is open to educational contributions through the use of the Internet and of various information and communication technologies;
• is critical, looking beneath the surface level of information for the meaning and significance of what is being studied;
• includes the development of an historical perspective of knowledge;
• seeks awareness of any pertinent spiritual, moral, ethical and justice issues related to the material being studied;
• values individuality and personal interests, moderated by a sense of responsibility and commitment to the ideals of community.

SUPPORT FOR TEACHING AND LEARNING
Effective teaching and learning at Australian Catholic University is encouraged by a range of strategies, which have been endorsed by Academic Board for the support of quality teaching and learning. These strategies include the establishment of dedicated units and organisational structures, policies and procedures, programs and professional learning opportunities, and grants and reward schemes. Examples of these are:

• Academic Skills Unit
• Academic staff mentoring
• Academic Staff Performance and Review Planning Program
• ACUonline
• Australian Catholic University Awards for Excellence in Postgraduate Research Supervision
• Australian Catholic University Excellence in Teaching Awards
• Australian Catholic University Teaching Development Grants
• Carrick Awards for Australian University Teaching
• Carrick Institute for Learning and Teaching in Higher Education projects
• Contribution to teaching and learning as an essential criterion for probation and promotion
• Course, unit and teaching evaluation policies and practices
• Graduate Certificate in Higher Education (to be offered from 2007)
• Institute for the Advancement of Teaching and Learning
• Involvement by staff in research and conferences
• The Library’s information literacy program
• Online induction unit on Teaching and Learning at Australian Catholic University
• Outside Studies Program
• Promotion of the nexus between teaching and learning, and research
• Review of all courses at least five-yearly
• Seminars by Excellence in Teaching Award, TALES, Teaching and Development Grant and Awards for Excellence in Postgraduate Research Supervision recipients
• Teaching and Learning Enhancement Scheme (TALES)
• University Teaching and Learning Committee, which reports to Academic Board
• University Teaching and Learning Evaluation Committee, which reports to the University Teaching and Learning Committee
• University’s Teaching and Learning Plan.

| Title: Policy on Quality Teaching and Learning | Approved by: Academic Board |
| Date: 19 July 2006 | Review Date: July 2009 |
| Officer Responsible: Pro-Vice-Chancellor (Academic Affairs) | Contact Officer: Executive Officer (Academic Affairs) |
DISCUSSION PAPER ON COMMUNITY ENGAGEMENT

1.1 Introduction
The theory and practice of Community Engagement have developed out of process of experience and reflection. Involvement with the community has been a moral imperative, given the mission of the University. It was also a demand of the community in its desire to have closer links with the University and its resources. How, then, can the University best articulate the meaning and value of Community Engagement at this stage of its development?

1.2 What is it?
The older notion of “Community Service” is a starting point. The University sought out appropriate community based contexts with a view to offering assistance where needed, mostly through students as volunteers. The University was chiefly interested in helping students gain perspectives for understanding and dealing with social realities which could be identified by the term “conscientization”. The process then moved to a discovery of transformed learning processes as described under the rubric of “Community Services Learning”. The development to the current model of “Community Engagement” (see ACUnique) represents a shift to partnership characterized by mutuality, equality of status, clearly defined goals and sought outcomes, frequent communication and long-term commitment.

Engagement is a reciprocal process whereby communication is backed up, if possible, by interaction in ways that can effectively alter the way that the problem is perceived by oneself and others. Genuine engagement moves beyond the level of mere service and allows the opportunity for societal response to help redefine the nature of the problem itself and perhaps forges new solutions.

The University now seeks to clarify shared goals with its partner in any particular engagement as well as openly seeking ways to transform learning processes for itself and for its students. Further, the University seeks to:

- Clarify the goals of such partnerships, and the kinds of partnerships involved in achieving such goals.
- Articulate the transformative character of teaching and learning in such contexts.
- To increase its public profile by participating more realistically in debates concerning social political policy.

1.3 Why do it?
The University's sense of its own mission impels it. The Church understands that a Catholic University,

...as any university, is immersed in human society; as an extension of its service to the Church and always within its proper competence, it is
called on to become an ever more effective instrument of cultural progress for individuals as well as for society. Included among its research activities, therefore, will be a study of **serious contemporary problems** in areas such as the dignity of human life, the promotion of justice for all, the quality of personal and family life, the protection of nature, the search for peace and political stability, a more just sharing in the world’s resources, and a new economic and political order that will better serve the human community at a national and international level. (*Ex corde Ecclesiae*, Apostolic Constitution on Catholic Universities, § 32)

To respond to these challenges, the University must become actively engaged with the community. As Catholic, the University takes Catholic moral imperatives and spiritual traditions seriously. The theology of the Incarnation articulates that God becomes human out of love for humans. God becomes involved in and exposed to all the processes and mundaneness of human life, especially injustice, suffering and untimely death. It is a process of **learning** to become human from other human beings. In so doing, God unites all that is divine and all that is truly human, to allow communication which transforms both. God seeks to affirm human beings and empower them. God’s strategy is one offering the example of involvement precisely where the need is greatest.

The Church understands itself as carrying on Jesus’ mission, not as if it were God, merely pretending to empty itself, but as “unworthy servants” who stand in the world—not outside or “above” it—, attentive to “the joy and hope, the grief and anguish of the people of our time” (G & S, 1) so to help liberate us all. We emphasize the role of learning in the Incarnation because of its centrality to the University’s own identity and mission.

Faithful to this Catholic heritage, we take up our stance in the world precisely as a Public University. We are open to all, in the hope and challenge that “nothing that is genuinely human fails to find an echo in [our] hearts” (G & S, 1).

The University stands in the public arena precisely to seek the common good, with the State and with communities. We bring a vision of the common good which, faithful to our sense of God, does not seek to annihilate differences, nor to make all like us, but to empower and find ways of living harmoniously in all the richness of human diversity.

Community Engagement, then, is a clear avenue for the University to carry on its mission in a manner that highlights the University’s distinctiveness. With its strong sense of (catholic) identity, it participates in the community as an equal with others in partnership to construct a more just society. The relationship is built on trust and mutual commitment and so cannot endanger the specific identity of either but rather be seen and experienced as affirming and enhancing those respective identities. In this way, both can be open to transformation and growth. The partnership empowers the community, the University and those individuals within them to work for a more just society which can be a home to many. It is a very concrete way to carry forward the concerns behind our institutional policies of inclusivity.

33
Community Engagement is a specifically named key institutional priority and direction for the University (Strategic Plan [Revised] for the period 1999-2008: 4.1, 7.5, 7.6, 10.4).

1.4 What are the challenges in Community Engagement?

a) For the community (and the people)
Communities often are composed of people who have suffered social injustice, rejection and marginalization. Such people are often vulnerable to further injury through misunderstanding, ignorance and insensitivity. A university is commonly perceived to be a powerful and privileged social institution, not very accustomed to “getting its hands dirty”. While acknowledging the opportunities, there is considerable risk for many communities in any engagement with such an institution. For example, the community’s ways of holding and sharing knowledge and culture could easily be perceived to “fall short” of the standards and levels common within a university and be, even implicitly, despised and/or perceived to be so.

There is the risk that real relationship building based on respect, trust and commitment, becomes short-circuited by the pressure to produce outcomes quickly and efficiently. The most serious outcome in such cases will be further alienation and a sense of being used.

Other difficulties and dangers could and should be articulated by the community.

b) For the University (and the people)
Finding sufficient resources (time, money, infrastructure and expertise) is a constant problem for the University, not only for creating initiatives but for day to day operations. The University’s engagement with the community requires resources, for administration and for what it may offer to the community.

Traditionally, gaining and communicating knowledge and skills require a high degree of discipline and control over the environment. Community engagement is perforce less controlled, more chaotic, yet creative, since it more directly engages with the complexities of reality, especially social reality.

Participants frequently experience resistance to this sort of involvement. Less control, higher levels of exposure to cultural differences, to poverty, violence and insecurity all contribute to levels of commonly experienced fears. Often it is difficult to understand where this activity might be leading: transformation is difficult to imagine before it happens.

1.5 What are the benefits?

a) For the community
- Gain access to educational resources offered by the University.
- Gain wider access to public, social and/or political participation.
- Be informed by research and teaching that are closer to key social realities.
- More explicit attention to the value, spiritual, social justice and human rights dimensions of community issues.
- Policy recommendations being based upon a commitment to the common good.
- Assistance in building community capacity and wellbeing.

Other benefits may flow depending on the precise nature of the engagement and the community's own judgement and evaluation.

b) For the University
- Develops a network of social relationships of trust, outside and inside the University.
- Provides contexts for research and teaching that are closer to key social realities.

Better equips students to engage in society by transforming their learning processes in ways that helps them see and respond to social realities rather than just institutional ones.
- Enhances ability to provide well researched and pertinent contributions to academia and political processes for change.
- Places the importance and relevance of multi-disciplinary approaches to the fore by addressing human and social problems in their complexity. It also gives these approaches a context for exploring how they can evolve in a fruitful manner.
- Provides the University with a higher public profile in a manner which emphasises its distinctiveness: concern for the care of students, for ethics and social justice, for the community, for engagement with society.
- Provides avenues for making the University's own sense and experience of community real by allowing for all to participate in ways that call on their common humanity and complementary skills.

1.6 How to do it

a) Some responses to the challenges
- There is already a resource pool for orientation of and reflection with students to help minimize the possible damaging effects of any culturally conditioned “blindness” in what are essentially cross-cultural contexts.
- Universities' economic viability will become increasingly more tied to their specialities or distinctiveness (Pursuing our future as ACU: 2004 address to staff by the Vice-Chancellor). Community Engagement provides strong content to ACU’s clear stance on seeking the Common Good and social justice. Thus it should help attracting students to study at ACU.
- Social cohesion is an important political issue and attracts funding such as the “Living in Harmony” program of the Federal Government.
Community Engagement is ideally placed to be able to make a submission for such grants.

- Higher public profile with a clear distinctiveness not related to conversion to Catholicism will attract more students.
- Better for students to confront their fears now where the nature of them is better understood and there is a resource pool to help them and explicit attention is given to the relational, analytical and reflective processes involved.
- Experience already gained in the School of Education, and in other universities has provided a pool of resources to deal with the “chaotic” elements in C.E.

b) Some necessary elements for it to be successful

The University must continue to dedicate the required structural and organisational resources to make Community Engagement a reality across every faculty and discipline.

The document identifies four broad principles for the development of effective Community Engagement relationships:

- Sustainability: long-term commitments will require multi-dimensional involvement: students, staff, teaching and learning, research.
- Reciprocity: not a “service flow” model, but full equality and mutuality built on respect for differences united for clearly stated mutual goals.
- Relevance: by establishing formal places of dialogue where all may contribute to identification of problems, issues and the search for solutions.
- Reflection: experience gained and not properly assumed is inadequate and at times harmful. Transformation of learning can only be gained by shared reflection on that experience.

1.7 How to know when we are successful?

- When communities report that ACU National is involved in real engagement and worthwhile activities rather than activities for activity sake.
- When research and scholarship contribute to engaged citizenship and social action.
- When there is an explicit commitment to the common good within and beyond ACU National.
- When internationalisation is intrinsic to our identity and life as ACU National.

---

2 Sobrino, J. Carta a Ellacuría: fineza y santidad Published at http://www.adital.org.br/asp2/noticia.asp?idioma=ES&noticia=9889, viewed on 02/06/04:
“You also saw that reflection in others. Monsignor Romero is a clear case in point. A man of prophecy and justice, a man of prayer and faith, he radiated something very special. Paraphrasing what Paul says about Jesus in the letter to the Philippians, Monsignor ‘did not cling to his state as Archbishop and a famous personality, but rather he stripped himself of his rank and took on the condition of a servant, making himself one of many’, like the poor men and women farmers in the Church of the poor.” [translation editor.]
