 Attempts to deal with child abuse

Current Australian child

Abstract

Australia is seeing an unprecedented increase in the rate of child protection notifications and children being taken into care. The burden of such high levels of notifications and removals impact not only the children and families but also the system which is trying to resource them. The concern is that these increases are unsustainable and overloaded child protection systems can be dangerous for the vulnerable families and children they are trying to protect and support. This paper hopes to raise some alternative

Australia is seeing an unprecedented increase in the rate of child protection notifications and children being taken into care. The burden of such high levels of notifications and removals impact not only the children and families but also the system which is trying to resource them. The concern is that these increases are unsustainable and overloaded child protection systems can be dangerous for the vulnerable families and children they are trying to protect and support.

(Australian and New Zealand Journal of Public Health, 2008)

Trends and challenges reported in 2008

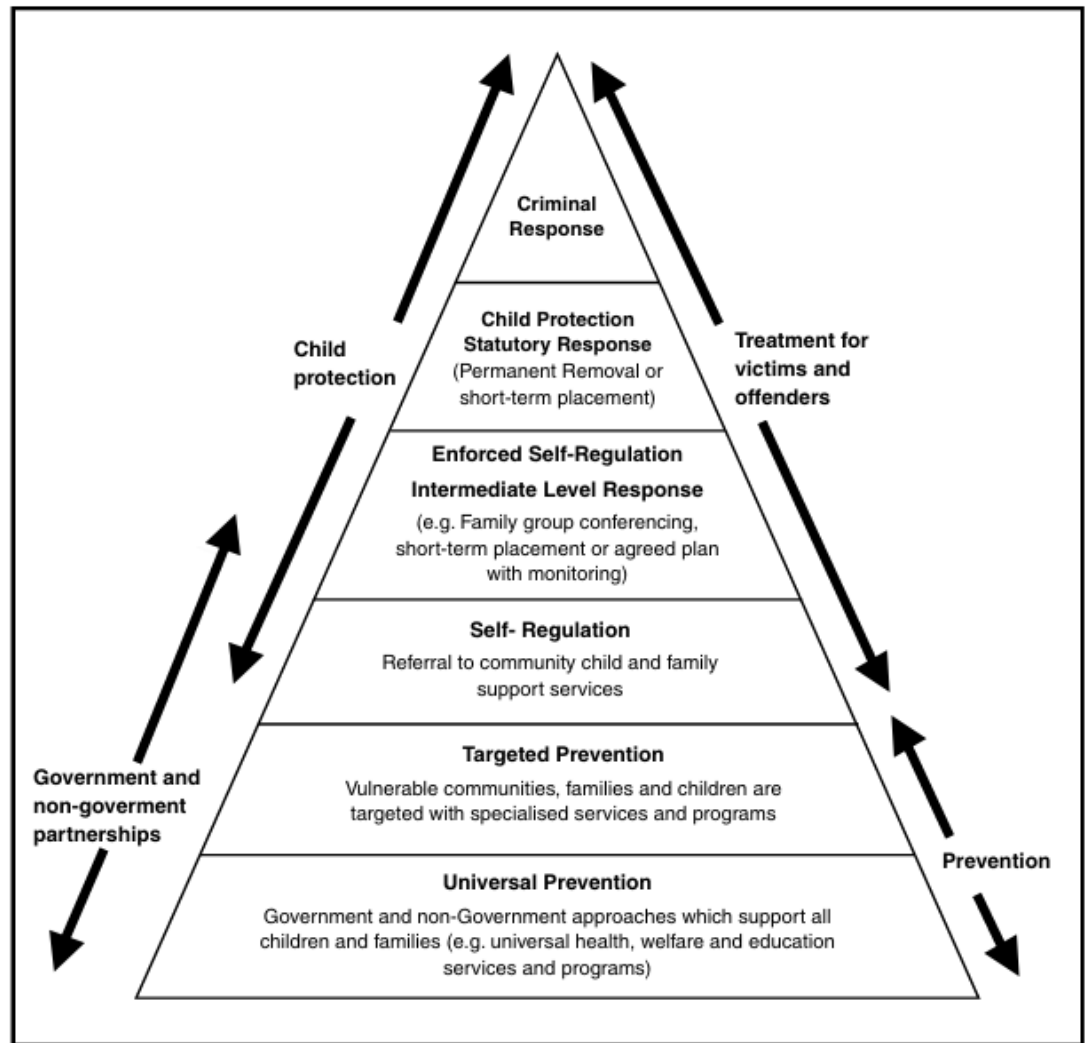

Figure 1: Numbers of Notifications and Substantiations in Australia from 1999-2000 to 2005-06 as reported by the AIHW, 2007.⁶

- Child protection systems focused at residual end of pathway (families investigated, coercive action taken)
- No sound prevalence data – only system reporting
- Majority of cases are notified are children in vulnerable families with risk from chronic adverse family circumstances
- Financial cost of CP systems high and the cost of the consequences of abuse and neglect (health, mental health and justice systems)
- Not sustainable in terms of workforce capacity.

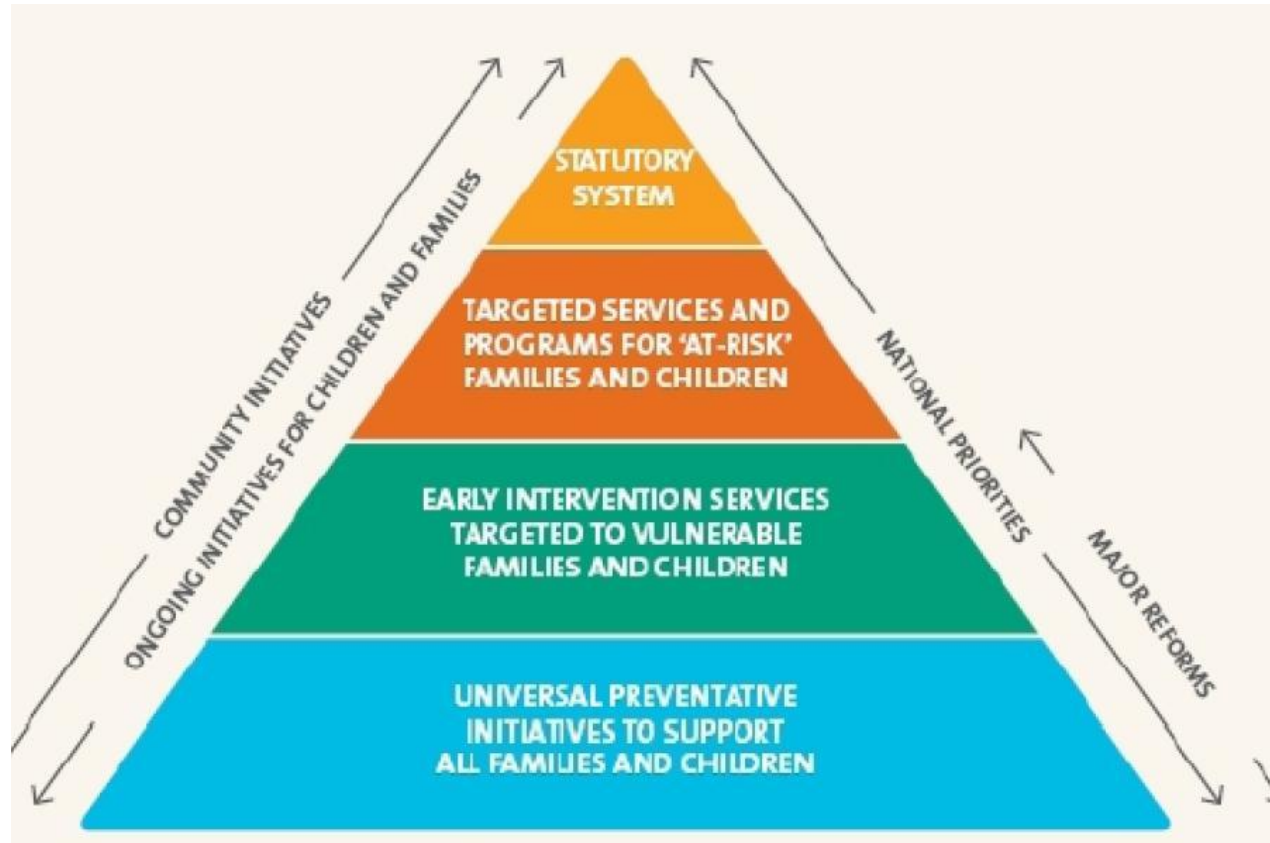

Public Health Response and Responsive Regulation

Figure 3: Responsive Regulation Model of Prevention and Intervention in Child Abuse and Neglect (modified from the Allen Consulting Group, 2003 based on the model by Ayres and Braithwaite, 1992).⁴⁶

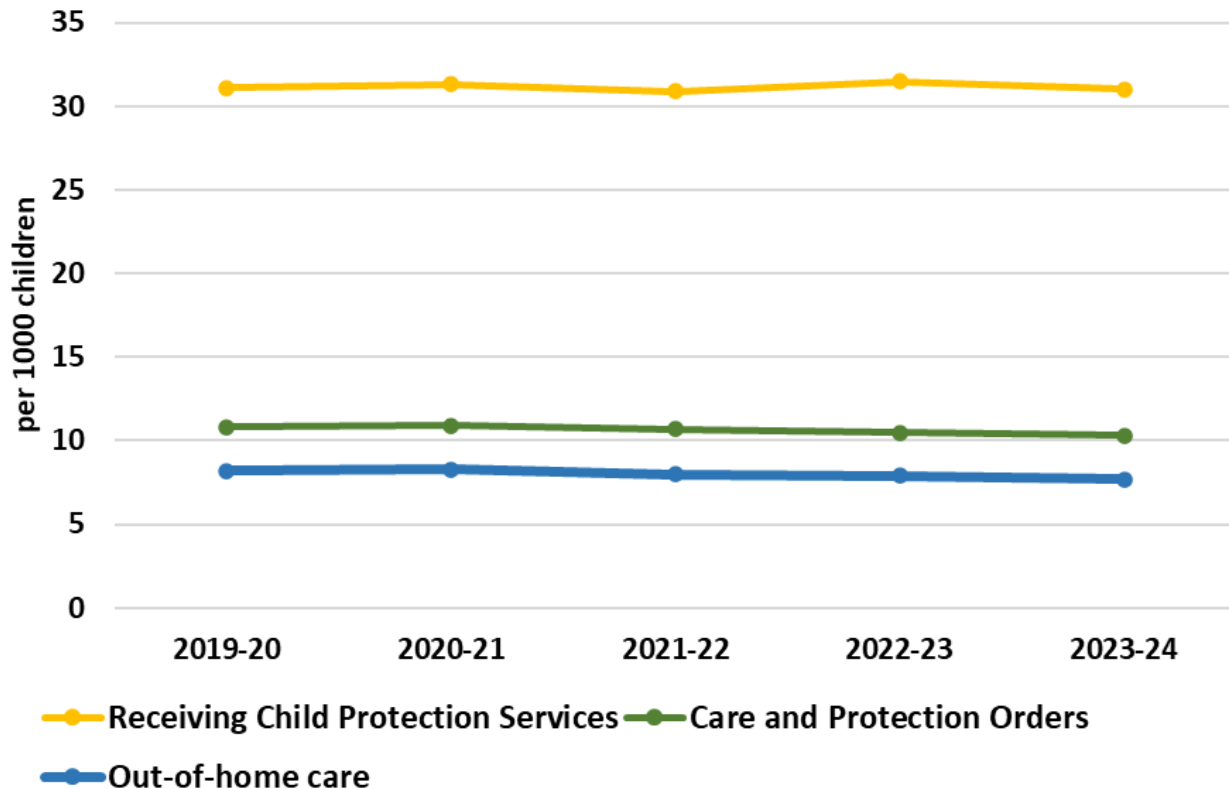

National Child Protection Framework (2009)

At the government level it is not only child protection and community services portfolios that have a role to play in improved outcomes for children in out-of-home care but also other portfolio areas such as health, education, justice, housing and employment. Families, communities, business and services all have a role. Everyone needs to work together.

Current Trends – Child Protection

Child Protection Involvement 2019-2024

2008/09

Notified: 207,642 children

OoHC: 34,069 children

(6.7 per 1000 children)

2023/2024

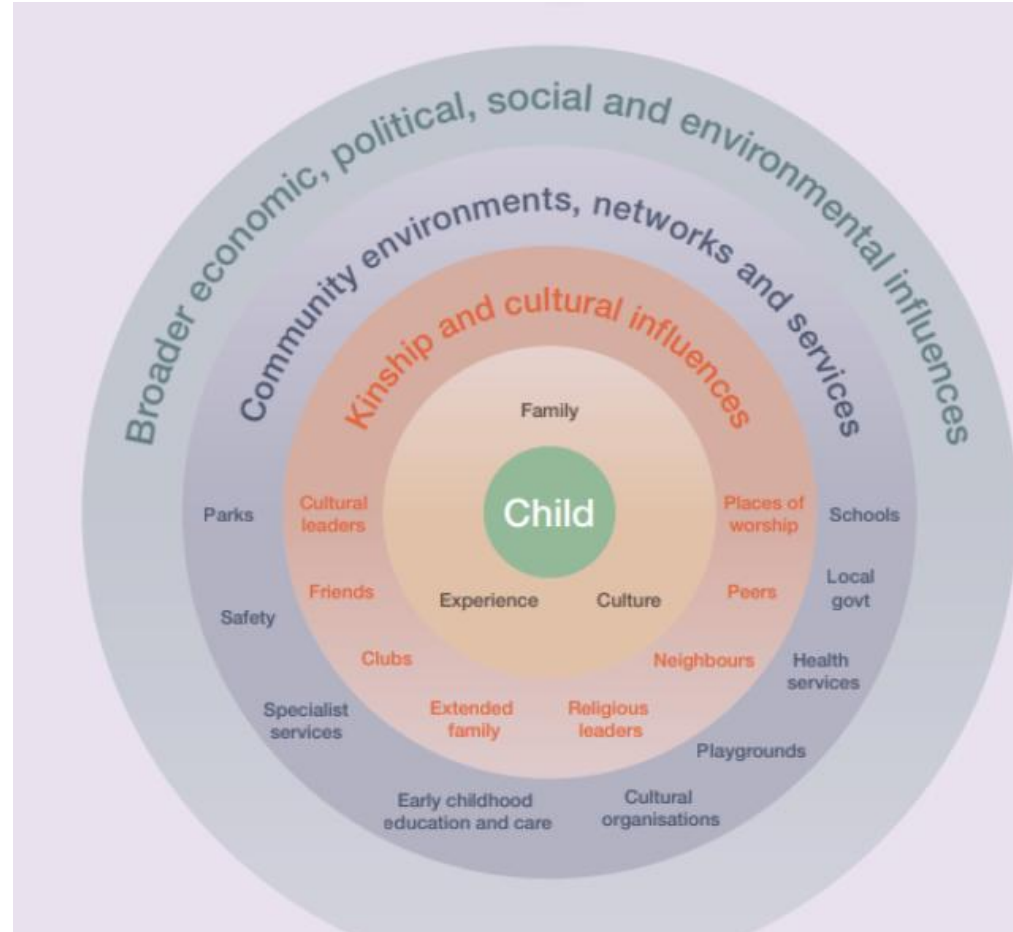

Receiving CP Services:

179,181

OoHC: 55,269 children

(7.7 per 1000 children)

Perinatal Child Protection Involvement

- Globally there has been an increasing focus on child protection involvement in the perinatal period (pregnancy -1 yr).
- In Australia we are seeing increasing number of families being reported during pregnancy and infancy.

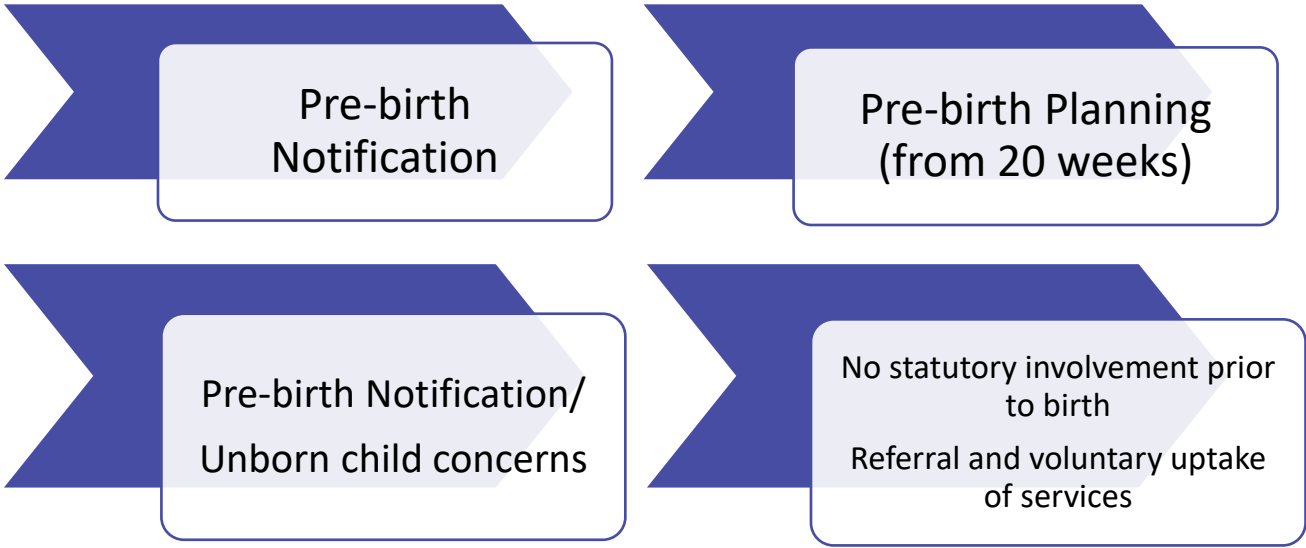

Infant removal into OOHC rates (AIHW)

Australia – Variability in perinatal involvement in child protection

Prenatal notifications – focus on earlier intervention, developmental vulnerability of infants, potential harm during pregnancy of substance use and domestic violence.

Mothers with Intellectual Disability:

Discriminatory attitudes and systemic failures to provide cultural and disability safety.

Enormous power imbalance between parents and child protection departments.

Entrenched structural biases appear to deepen as parents with disability are propelled through the system

Parents with disability and their children's' rights are serially violated. These include - rights to be supported to safely remain legally together as a family, to be treated with dignity, respect and without discrimination - rights to be informed, be heard and participate in child protection proceedings.

Abstract

Limited research has directly sought the input of parents involved in the child protection system during pregnancy and with their infants. As the focus of these policies and practices, parents have a unique and important insight not available to others, so it is vital to obtain their input. As part of a larger Australian study, qualitative interviews were undertaken with 13 parents asking about their views and experiences. Parents predominantly became involved with child protection services during pregnancy through a prenatal report. Parents who previously had their newborn removed from their care described it as sudden and unexpected, leaving them distressed and unsupported post-removal, with a growing list of requirements for them to see their baby or for restoration to be considered. Domestic violence was a particular issue of concern for some mothers who expressed distress that their partners, perpetrators of violence, were allowed access to their infant with fewer requirements than for them. Improvements recommended by

Perinatal involvement - summary

Parents were most likely to be supported from agencies outside the Department – family advocates, non-government support workers, social work staff in hospitals, health care workers, family support organisations, legal organisations.

Parents reported lack of consultation and negotiation regarding pre-birth plans (egs – asking mothers to provide a pre-birth plan with no support to develop one, lack of referral to support services, historical rather than current concerns being raised)

Suggestions for improvements

- Improvements in casework to collaboratively work in partnership with parents to develop and implement safety and wellbeing plans.
- Improved practice when working with families and mothers experiencing family and domestic violence - partnering with mothers who have experienced violence to address their concerns regarding perpetrators access to children and greater focus on perpetrator accountability.
- Families experiencing homelessness require support to secure stable housing, particularly:
 - mothers escaping domestic violence
 - those who lack family support,
 - have been in out-of-home care,
 - transitioning from prison.
- This includes options for supported placements for pregnant mothers and mothers with infants.

Care Co-ordination and Support Pathway

Prenatal

Postnatal

Infancy

Individual and Family Strengths,
Supports and Resources

Co-design outcomes:

- Collaboratively developed leading practice principles, a practice framework and for guidance to improve perinatal practice and evidence-base knowledge
- Our co-design process identified the need for:
 - Clearly articulated support pathways for mothers facing adversity during pregnancy
 - Stepped levels of case management support for mothers based on individual needs
 - Empowerment of families through a partnered approach
 - Identified a range of system issues impacting on perinatal processes and support pathways

Mental health and Substance-related disorders – Child Maltreatment Allegations

O'Donnell et al, Journal of Epidemiology and Community Health, 2015

Risk of Maltreatment Allegation following assault hospitalisation

	Risk of Allegation	
	Univariate	Multivariate
Non-Aboriginal Mothers	8.86 (8.55-9.19)	1.93 (1.80-2.07)
Aboriginal Mothers	2.66 (2.56-2.76)	1.56 (1.43-1.70)

Indigenous Child Removals (Western Australia) Study

Led by Prof Sandra Eades

Aims: Identify factors that could reduce the number of Aboriginal children going into out-of-home care and ways to better support families at risk, children in care and kinship carers.

I-CaRe WA Study

The Physical and Mental Health of Mothers of Aboriginal Children in Out-of-Home Care in Western Australia

Aims: To describe the health and wellbeing of mothers of Aboriginal children who enter out-of-home care; the types of health and mental health conditions experienced by these mothers; and the level of co-occurring conditions that they experience.

Leaving Out-of-Home Care (OOHC) in Australia (AIHW, 2025)

2023-2024:
-4295 young people (total)
-39% Aboriginal and Torres Strait Islander young people

Research on care leavers

Robust international evidence that care leavers have some of the poorest outcomes of all young people in the areas of:

- Health
- Mental health
- Education
- Employment
- Housing

In 2018 we reported our own findings on the outcomes for young people who had experienced OOHC

Lima, O'Donnell, Maclean, 2018

**Improving the lives
of vulnerable children.**

Hospital admission rates were:

2x higher for the Care group than for the Control group

Contact with a mental health service as an adult was:

3x more likely for the Care group than for the Control group

Adult **death rates** (18+) were **about 3x higher** for both the Care group and the Maltreatment group than for the Control group.

The Care group was:

2.5x less likely to achieve WACE and **6x less likely to be university bound** than the Control group.

Juvenile and/or adult **community-based sentences** were:

3.5x more likely for the Care group than for the Control group

Home Stretch nationally

WA – Universal care
(Allowance + casework support)

NT – Extended care

SA – Extended care
(foster and kinship,
no guaranteed support
for residential care)

QLD – Universal care

NSW – Universal care

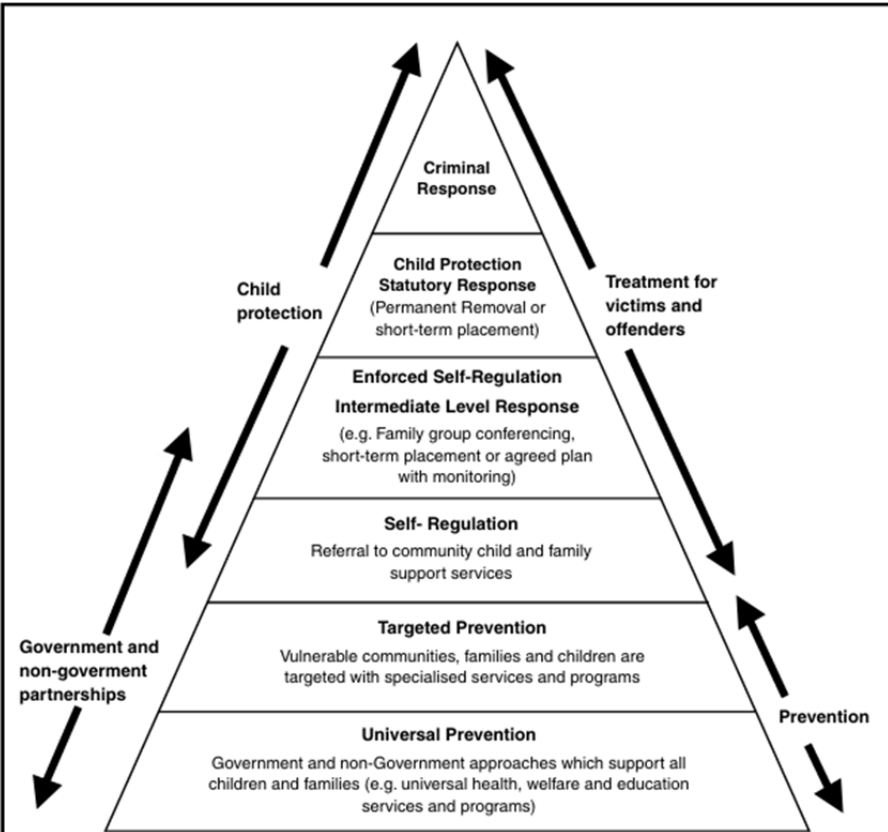

VIC – Universal care
(Allowance + case work support)

ACT – Extended care,
now legislated right to access
care from 2024

TAS – Extended support
(foster and kinship, no
guaranteed support for
residential care)

The Introduction of Extended OOHc Until 21 Years in Australia: A Mapping of Policy, Legislation and Programs in Each Jurisdiction (2025). Mendes, Roche, Kristo, O'Donnell, et al, Aust J of Social Issues.

Public health approach to Child Protection – Priority efforts needed?

- Closing the Gap: Not on track
 - Aboriginal led strategies
 - Supporting ACCO service responses
- Government strategy – Families with multiple and complex needs
- Perinatal co-ordinated care for families facing adversity
- Children in care timely access to services and minimum standards for transition support
