Inspired by Saint Mary MacKillop I am motivated by my belief that all students deserve a quality education. Therefore, teachers must inspire their students to love learning.

I believe we are life-long learners and our desire to learn begins in early childhood. Passionate educators have the power to help today's technology focused students succeed in making their wildest dreams a reality. Learning should not just be about learning facts and figures and being able to remember them, rather learning should lead students to understand the concepts, apply them to their lives, analyse the information received, evaluate, and justify their decisions, and create their own ways of seeing things.
